Data table structure and				
attribute description				
Attribute name	Definition	Unit	Type	Attribute description
Id	Identification code of the polygon used to outline the different sites based on ecosystems classifications (Green and Klinka, 1994).		Integer	Numeric value for each polygon.
Year	Year the data was recorded.	Date	String	Values: yyyy. E.g. 2008. NULL = neither the original meta-data nor accompanying report provided the year of creation.
Month	Month the data was recorded.	Date	String	Values: 1-12. E.g. 2=February. NULL = neither the original meta-data nor accompanying report provided the month of creation.
Day	Day the data was recorded.	Date	String	Values: 1-31. E.g. 15=the 15th day of a month. NULL = neither the original meta-data nor accompanying report provided the day of creation.
Area	Area (m^2) of the polygon.	m^2	Real number	E.g. 700.230 m ²
Site series	Site classification is based on the Site Series of the Vancouver Region (Green and Klinka, 1994). The relative composition of species vegetation is used as a proxy to determine the site series, which may indicate biogeoclimatic zone, soil moisure, or the nutrient regime.		String	Site series Values: Refer to Green and Klinka (1994, pg. 71-127) for the values below. FdPlArbutus; FdOniongrass; FdOregonGrape; CwTwinberry; Refer to Harrop-Archibald (2008, pg. 65-70) for the values below. O2ndGF = older second growth forest; Y2ndGF = younger second growth forest; WoLa = woodland; WaTaFlx = strongly fluxuating water table; Agri = Western style agriculture. Ecosystem Classification Values: O2ndGF = older second growth forest; Y2ndGF = younger second growth forest; WoLa = woodland; WaTaFlx = strongly fluxuating water table; RiA = Riparian Area; Agri = Planted by Western agricultural methods.
Ecosystem	Ecosystem classification based on Harrop-Archibald (2008). Successional status describes the tree layer based on the BC Ministry of Forests and BC Ministry of Environment Field Manual For Describing		String	Refer to Harrop-Archibald (2008, pg. 74-77). Values: LatSe=late seral; MatCli = maturing climax; MatEdCli = maturing edaphic climax; MatSe = maturing seral; YouSe = young seral.
SuccStatus	Terrestrial Ecosystems (1998). This is depedent on the age, density, and canopy of trees.		String	Refer to BC MOE and MOF (1998, pg. 13-16). NULL = value was not described.
Compromised	Polygons with large stands of trees dead or dying without an obvious reason for mortality. No areas were determined to be compromised (2008). Polygons with trees that show galls from insects. No polygon has determined to be diseased although the wildlife tree layer has many trees		Boolean	<u>Values (assumed):</u> 0=No, 1=Yes.
Diseased	labelled with galls (2008).		Boolean	<u>Values (assumed):</u> 0=No, 1=Yes.
Slope	Numerical slope angle of the ground.	0	Real number	<u>Values:</u> 0-90°.

Aspect Cardinal direction the slope is facing. Dominant species present. Method of species coverage determination (e.g. Visual, transect, line, plots) was not found. DomPercent Dominant species persent cover. Codominant species present. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. CodSpecies Codominant species present. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. Coddominant species present. Method of species coverage determination SubSpecies Coddominant species present. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. Sublominant species present. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. String Refer to 'Species Abbreviations' on the other Excel Sheet. Values: 0-100. String Refer to 'Species Abbreviations' in Excel Sheet. Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other # Attributes: the percentage coverage than Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percent# Attributes: the percent# Attributes: the	S	lopePosit	Categorical variable based on the position of where the slope was recorded or relative indentation to the ground. The higher the slope, generally the drier. The lower slope or depressed ground, generally wetter.		String	Slope Poistion Values: Crest: at the top of the slope. Depression: indentation into the ground. Level: slope relatively equals 0 or perpendicular to gravity. Midslope: midway along the slope. Toe: at the bottom of a slope If there are two categories, the value is in between or characterized by both categories. E.g. midslope/toe. Values: {North; South; West; East; Northeast; Northwest; Southeast; Southwest}. A combination of two means the direction is facing in
DomSpecies visual, transect, line, plots) was not found. DomPercent Dominant species percent cover. CodSpecies (e.g. visual, transect, line, plots) was not found. CodSpecies (e.g. visual, transect, line, plots) was not found. Coddominant species present. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. Subdominant species present. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. SubSpecies (e.g. visual, transect, line, plots) was not found. SubJectify Subdominant species persent. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. SubJectify SubJectify Other species persent, where # sequential increases as percentage decreases. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other1 species would have more percentage coverage than Other13. Percent# Attributes: the percentaage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentaage of the most abundant plant after 'SubSpecies'. E.g. Percent#,	A	spect	Cardinal direction the slope is facing.		String	ě
Dominant species percent cover. Codominant species present. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. String Refer to 'Species Abbreviations' on the other Excel Sheet. CodPercent Coddominant percent cover. Subdominant species present. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. String Refer to 'Species Abbreviations' on the other Excel Sheet. String Refer to 'Species Abbreviations' in Excel Sheet. String Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other13. Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent#, Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent#, Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent#, Percent2, Percent3	_	. g :			Gr. i	D.C. at 10 and a All and a distribution
CodSpecies Codominant species present. Method of species coverage determination (e.g. visual, transect, line, plots) was not found. CodPercent Coddominant percent cover. Subdominant species present. Method of species coverage determination SubSpecies (e.g. visual, transect, line, plots) was not found. SubOpercent SubOpercent SubOpercent Other species persent, where # sequential increases as percentage decreases. Method of species coverage determination (e.g. visual, transect, line, plots) Was not found. Other species percentage where the # corresponds to the associated other CodOpercent String Refer to 'Species Abbreviations' on the other Excel Sheet. Values: 0-100. String Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other1 species would have more percentage coverage than Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent1, Percent2, Percent3		•				Refer to Species Abbreviations on the other Excel Sheet.
CodSpecies (e.g. visual, transect, line, plots) was not found. String Refer to 'Species Abbreviations' on the other Excel Sheet. CodPercent Coddominant percent cover.	D	omPercent		%	String	
SubSpecies (e.g. visual, transect, line, plots) was not found. SubPercent Subdominant species percent cover. String Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other1 species would have more percentage coverage than Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent, Percent2, Percent3	c	odSpecies	1 1 2		String	Refer to 'Species Abbreviations' on the other Excel Sheet.
SubSpecies (e.g. visual, transect, line, plots) was not found. SubPercent SubOpercent Other species persent, where # sequential increases as percentage decreases. Method of species coverage determination (e.g. visual, transect, line, plots) Was not found. String Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other1 species would have more percentage coverage than Other13. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Attributes: the percentage of the most abundant plant after 'SubSpecies'. E.g. Percent# Perce	c	odPercent	Coddominant percent cover.	%	String	Values: 0-100.
SubSpecies (e.g. visual, transect, line, plots) was not found. SubPercent Subdominant species percent cover. SubPercent Subdominant species percent cover. Other species persent, where # sequential increases as percentage decreases. Method of species coverage determination (e.g. visual, transect, line, plots) Other# was not found. String Other# Attributes: the most abundant plant after 'SubSpecies'. E.g. Other1, Other2, Other3 Other1 species would have more percentage coverage than Other13.
